English
fluent reading/writing

Hungarian
mother tongue

ABOUT ME

Computers and technology was my greatest passion since I was young, building computers and customise software. I became a software developer because I believe it can make a positive change in our lives. My goal is to make software that helps people and businesses and I am not making compromises when it comes to learning technologies and building the perfect applications. I strongly believe I can make a change through development that is the main reason behind the byAndro brand.

EXPERIENCE

InvoiceMe App

React, Redux, CSS Modules, REST API, authentication

- Self developed full stack invoicing application
- Able to create, edit, save and delete invoices
- Keep track of your invoices status
- Reusable React components with CSS modules
- Redux toolkit for state management with thunks for API calls
- Authentication with custom hooks and Firebase auth REST API on backend
- Authenticated login with Firebase auth tokens and automatic logout
- Uses Firebase real-time database with token access
- Form templates with custom hook authentication
- Optionally keep user logged in with token refresh

Countries of the world

Html, Sass, JavaScript, REST API

- Self developed app built on MVC architecture
- Able to search, filter and see details of any country
- Uses REST countries API
- Using ES6 JS with promises
- Custom promises functions
- Switch colour mode
- SPA with only pure JavaScript

Forkify App

Html, Sass, JavaScript, REST API

- Built on MVC architecture
- Search and bookmark recipes or add you own
- Uses REST recipes API
- Using ES6 JS with promises
- Interactive serving update and search results pagination
